

With this edition of Jefferson Lighting's church lighting catalog, we move ahead into areas of lighting that are of concern to all congregations: **performance and energy-efficiency**. Not only will you see unique designs, certain to fit any decor, but you will also notice a variety of lamping options for each fixture that can make your lights extremely cost-efficient and virtually maintenance-free for years to come.

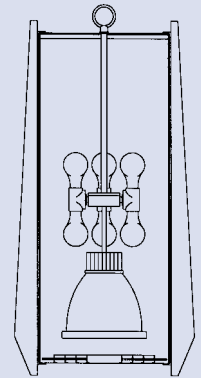

Our standard incandescent fixtures will still be offered, for sure, especially to churches that prefer the warmth of easily dimmed incandescent light. But, for those churches with very high ceilings, or otherwise difficult-to-relamp fixtures, may we offer some suggestions to make your life a little easier?

Try our fluorescent option. Yes, six 39 watt fluorescent lamps are half again as bright as 6-100 watt A-lamps. Good even light you won't have to replace for years. Ask us about dimmable fluorescents, or let us split circuit the fluorescent cluster for you effectively dimming the light by 50%.

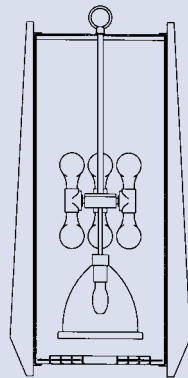

514-PC-FLOR

Try our quartz option. The lamps are brighter and cheaper than standard R-40 floods. They are dimmable with standard incandescent dimmers. Lamp life, believe it or not, actually increases significantly as these lamps are dimmed. Quartz downlights are TV studio quality lights. Perfect for services that will be broadcast or video-recorded.

316-PC-INC-QTZ

Try our metal halide option. A 400 watt metal halide lamp is about 5 times brighter than a 500 watt incandescent lamp and lasts about 15 times longer. Quartz restrike lamps are available to provide temporary lighting until the metal halide lamp warms up. For the church that does not want to change lamps often, metal halide is a great alternative.

416-PC-INC-MH

Try our winches. For the ultimate in easy maintenance you can't beat flicking a switch and having your pendant or chandelier lower to meet you. Electric winches are fully automatic. Manual winches must be operated by hand from above the fixture. Contact the factory for more details. See page 31 for description.

WM-200

As always, you will find the fixtures in this catalog named for people and places in the life of Thomas Jefferson. Our little company remains committed to bringing you finest quality fixtures at a reasonable cost. Seasoned hardwoods, real glass, solid brass where indicated ... good stuff. We think Thomas would be proud. We've come a long way since the alabaster oil lamp he used to read by in his study at Monticello or the candle in a young boy's hand.

DIFFUSER PANELS

White Acrylic, Faux Alabaster, White Opal Glass, Streaked Opal Glass

Rockbridge series pendants with optional quartz down-lighting illuminate this beautiful sanctuary in Lafayette, Indiana.

Photo courtesy FBI Builders

Custom glass fixtures require great attention to detail. Here, crown and scallop designs are carefully cut into a mask before sandblasting to recreate an Art-Deco lens.

Our foundry can pour a variety of metal castings. Bronze plaques like this one can be customized by our artists to create an enduring legacy of your church's history

Albemarle series chandelier minus the central hub. Modified to fit a lower ceiling within a wide auditorium.

Our shop has the ability to restore and replicate existing church fixtures. We can also convert them to more energy efficient light sources for you. The fixture shown was retrofitted with a Quartz center light and fluorescent lamps in the satellites.
